Center for Healthy Children 

Researchers at Penn State are conducting a study on how a child's environment affects their biology and subsequent health.

The project involves completing Penn State's Child Health Day on the University Park Campus in State College, PA. Your child will receive a comprehensive health screening and you will be asked to complete several assessments about your child's physical health and emotional well-being. Travel and hotel costs are free for eligible families.

Eligible participants also receive financial compensation up to \$520 for complete participation.
